early signs of poisoning

vet note: a pet's reaction to a given toxin will depend on the amount ingested, the body weight of the pet and, in some cases, their breed and health history

- | | | |
|---|---|---|
| <input type="checkbox"/> Vomiting | <input type="checkbox"/> Decreased appetite | <input type="checkbox"/> Excessive thirst |
| <input type="checkbox"/> Diarrhea | <input type="checkbox"/> Seizures or tremors | <input type="checkbox"/> Black or tarry stool |
| <input type="checkbox"/> Drooling | <input type="checkbox"/> Weakness or lethargy | <input type="checkbox"/> Infrequent urination |
| <input type="checkbox"/> Incoordination | <input type="checkbox"/> Collapse | <input type="checkbox"/> Increased heart rate |
